
Evidence, authority and attribution

Case dossier and research register

Historical intelligence cases, recent scientist reports, anomalous health incidents, and documented espionage comparators. Each proposition has its own evidence threshold.

Research cutoff: October 1, 2026
Version 1.0 | Source-checked working edition

Prepared with AI-assisted research. Source authority, case relevance and document authenticity must be evaluated separately. This is a research resource, not a certification of facts or a legal filing.

1 What this dossier establishes

The reviewed record does not establish one network connecting these deaths and disappearances. It does establish particular historical abuses, individual crimes, official inquiries and important unresolved questions. Evidence supporting those narrower propositions is retained alongside evidence that weakens a broader allegation.

This edition covers the supplied historical cases, the recent U.S. scientist/defense-personnel reports, selected Russian deaths, anomalous health incidents (AHIs), and three documented espionage or transnational-operation comparators. It is a bounded public-source review, not a complete investigative file, epidemiological study or finding that any reader is being targeted.

The original ranking of cases by how suspicious they seem has been replaced by claim-level assessments. A documented death, an official inquiry, a laboratory affiliation, an attributed family statement and a proven perpetrator are different facts. They should never share one undifferentiated confidence label.

1.1 The strongest reusable conclusions

- Olson’s nonconsensual exposure is documented; the later homicide allegation requires separate proof. [H01, H04]
- A congressional request for information establishes an inquiry, not the truth of the media allegations it cites. The April 20, 2026 letter expressly described the reporting as unconfirmed. [R01]
- The Colby medical examiner’s accidental-death opinion must be included in any fair review. [H06]
- The 2023 and 2025 AHI intelligence assessments were recalled in June 2026. Reusing their conclusions without that status change would mislead readers. The recall does not establish a specific attacker. [W04]
- Confirmed espionage cases show the value of direct evidence of access, transactions, communications and control failures. They do not supply missing causal links in other cases. [P01, P03, P04]

1.2 How to use the packet

Read the case’s status, chronology and claim review together. Follow each source ID to the source register and its pinpoint. The atlas describes the meaning of each connection; no unlabeled line should be interpreted as criminal coordination. The toolkit contains blank forms for a new case. The data folder holds editable CSV and JSON registers; the evidence manager is optional and works locally.

2 Method, provenance and confidence

2.1 Five questions for every assertion

1. **Observation:** What happened, where, and at what time? What was directly observed?
2. **Record:** Who created the evidence, by what process, and can that record be authenticated?
3. **Causation:** What connects the observed outcome to a proposed mechanism?
4. **Attribution:** What connects the mechanism to a specific actor, instruction or transaction?

5. **Review:** What contradicts the claim, what remains missing, and what would change the conclusion?

Status	Meaning in this edition
Documented	A record supports the narrow proposition. An official statement is proof of that statement, not automatically every underlying allegation.
Reported / attributed	A named person or publication reports a fact; original record not acquired or independently confirmed.
Disputed	Material records or interpretations conflict. State each version and its provenance.
Unresolved	Evidence is insufficient to choose among reasonable explanations.
Unsupported inference	The reviewed evidence does not bridge the asserted causal or attribution step. This is not a declaration that the proposition is impossible.
Superseded	A dated later record changes an earlier report's status. Keep both in the correction history.

2.2 Selection and statistical significance

The case list was supplied by the requester and expanded to audit those claims. It is not a random or complete sample. Deaths, disappearances, occupations and time spans are heterogeneous; published totals change with inclusion rules. No excess mortality, statistical significance, common clearance status or common perpetrator can be calculated from that list alone.

Before testing a cluster, register a population and observation period in advance, obtain a denominator and comparable age/sex/cause-specific rates, define inclusion/exclusion rules, deduplicate people, measure missingness and separate discoveries from confirmations. Report uncertainty and multiple-comparison effects. A statistician should review the design before any numerical claim of excess risk is published. This is an author-created research protocol, not a finding from the case list.

2.3 What was and was not collected

Sources were located through current web search and inspected as public pages or documents. Some were available only through news reporting, a mirror, or an indexed extract; those limits are recorded. Selected public government PDFs are archived with acquisition metadata and SHA-256 hashes. They are not certified custodian copies. Other source IDs are citations only, not collected exhibits. No interviews, physical examinations, classified review, subpoena returns or private clinical records were obtained.

Retrieval date and research cutoff are October 1, 2026. Event dates and publication dates are kept separate. A missing later result means this review did not locate one, not that none exists. No agency, witness or record custodian was contacted. Recheck current status before a filing or public accusation.

2.4 Public transparency pool

Publish a reviewed claim register, lawful public sources, redacted derivatives and a visible correction history. Preserve restricted originals separately. A public Git repository is a publication channel and may be copied indefinitely; deleting a later commit cannot recall copies. Public submissions should enter a review queue with a source URL, exact claim, pinpoint, contradiction and disclosure permission, not automatic publication. A claim's status may move in either direction when new evidence arrives.

3 Historical intelligence cases

3.1 Frank R. Olson

CASE-OLSON

Status. Nonconsensual dosing documented; manner and responsibility for fatal fall contested.

Documented nonconsensual government drug experimentation followed by a fatal hotel fall; a later homicide allegation remains unresolved in the materials reviewed. This case has strong evidence of an underlying abuse, but that is a separate proposition from proving an assassination. [H01, H02, H03, H04, H05, H09]

Chronology

Date	Event and source
1953-11-19	CIA personnel secretly administered LSD at an Army–CIA scientific meeting attended by Olson. [H01]
1953-11-23	Ruwet later stated that Olson asked whether he should be fired or quit, and expressed concern about his performance. [H05]
1953-11-24	Ruwet described renewed agitation and arrangements for assistance in New York. [H05]
1953-11-28	Olson died after a fall from a New York hotel window. Use November 28 provisionally; some official historical text gives November 27. [H03, H01]
1975-07-21	President Ford met the family, apologized for the circumstances of the death, and promised information and discussions of claims. [H02]
1976-10-12	Ford signed Private Law 94-126 providing \$750,000 total relief for the four survivors. [H03]
1994	The sons’ later complaint described exhumation and a forensic interpretation of a temple hematoma as evidence of a blow before the fall. [H04]
2012-11-28	Sons filed negligent-supervision litigation alleging murder and concealment. [H04]
2013-07-17	Court dismissed on threshold grounds including timeliness, settlement and sovereign immunity; it did not adjudicate a homicide. [H04]
2026-06-30	House task force held a hearing on MKULTRA accountability and declassification. [H09]

Claim review

Olson was a CIA-employed biological warfare scientist. *Needs precision.* The presidential statement identifies him as an Army-employed civilian biochemist. CIA involvement is documented; calling him simply a CIA employee blurs that distinction. [H03, H01]

Dosing occurred nine days before death. *Substantially corroborated.* November 19 to November 28 is nine calendar days. Historical source discrepancies should remain visible rather than silently harmonized. [H01, H03]

Olson was driven by guilt over biological weapons work and intended to resign. *Partly supported; motives not established.* Ruwet records a discussion of quitting and distress about perceived incompetence. This does not independently establish the fuller moral-guilt narrative. [H05]

1994 autopsy proved government murder. *Not established.* The opinion reports the family's forensic allegation. That passage is not a judicial finding and is not a substitute for the complete autopsy file. [H04]

Apology and financial settlement occurred in 1975. *Chronology correction.* The apology occurred in July 1975; the compensation legislation was signed in October 1976. [H02, H03]

The precise fall was from the thirteenth floor. *Source discrepancy.* The court's background says thirteen stories; Ford's statement and Senate account say a tenth-story window. Obtain original scene records before using a precise floor label. [H04, H03, H01]

Historical abuse demonstrates that current whistleblowers with similar experiences were targeted by the same network. *Unsupported inference.* This history can inform questions and preservation priorities; a present-day allegation requires its own independently attributable records.

Records still needed

- Obtain certified 1953 death certificate, scene report and original autopsy; compare later amendments with original entries.
- Acquire complete 1994 forensic report, photographs, underlying laboratory notes and independent expert assessment.
- Obtain Manhattan prosecutor's reopening/closure correspondence before representing any official change of manner of death.
- Preserve source versions: some dates and floor descriptions conflict.
- Document source destruction and non-production separately; missing evidence does not identify an offender.

Research significance. A useful precedent for investigating informed consent, supervisory authorization, adverse-event response, disclosure and record preservation. The evidentiary lesson is to prove each proposition separately: program existence, individual exposure, injury, causation, intent and responsible actor.

3.2 William E. Colby

CASE-COLBY

Status. Official accidental manner of death; no homicide established in reviewed record.

Colby’s public oversight role is documented. His death record supports accidental drowning and hypothermia associated with severe atherosclerotic disease; a specific heart attack or stroke was a possible precipitating event. The reviewed materials do not establish assassination or coerced suicide. [H06, H07, H08]

Chronology

Date	Event and source
1973-05-23	Colby directed CIA employees to report information about possible illegal agency activity for oversight review. [H08]
1975-05-23	Colby testified before the Senate Church Committee. [H07]
1996-04-27	Last contact date described in the medical examiner’s opinion; Colby was staying at his Maryland vacation residence. [H06]
1996-05-06	Body recovered from the Wicomico River after a search, according to the autopsy opinion. [H06]
1996-05-10	Signed medical examiner opinion classified the death as accidental, with drowning and hypothermia associated with cardiovascular disease. [H06]

Claim review

A stroke or heart attack was conclusively demonstrated. *Overstated.* The examiner described severe atherosclerosis and inferred a likely complication before immersion; the precise initiating medical event was not demonstrated. [H06]

Medical records support a violent attack. *Not supported by reviewed autopsy.* The report found no evidence of significant traumatic injury; it records decomposition, which limits examination. [H06]

Colby’s testimony and controversial disclosures prove a motive for his murder. *Unsupported causal inference.* His testimony is verifiable, but historical conflict or opportunity alone does not prove an attack, perpetrator or causal chain. [H07, H08]

The Olson and Colby stories form a proven assassination network. *Not established.* Institutional overlap is an atlas relationship, not an operational or causal connection between deaths.

Records still needed

- Obtain the autopsy directly from Maryland’s medical examiner with custodial certification; the inspected PDF is a third-party scan.
- Obtain complete search/recovery, scene, canoe and witness records through lawful access procedures.
- Do not treat accounts of a running computer or radio as incriminating without authenticated timing and ordinary-use context.

- Keep competing hypotheses and their predicted evidence explicit; evaluate accident, acute illness and any specific foul-play allegation against the same record.

Research significance. Demonstrates why documentary evidence capable of weakening a suspicion must be included alongside material that raises questions. Oversight history is relevant context but does not overturn the medical evidence.

4 Recent U.S. scientist and defense-personnel reports

A real congressional inquiry and reported FBI effort sought possible connections. The obtained record does not establish a coordinated foreign/domestic network behind the selected deaths and disappearances, does not show that all individuals were scientists or currently cleared, and supplies no denominator or baseline for a statistical excess-mortality claim. Several specific claims have stronger independent explanations or later corrections. Unresolved cases still deserve investigation; unresolved is not an affirmative perpetrator identification. [R01, R02, R03, R20, R21, R22]

Case statuses below are limited to the dated sources reviewed. The roster is an audit of public claims, not a verified victim set or proof of a common clearance level.

There is a massive joint FBI/White House/House investigation proving a coordinated threat. House correspondence requests briefings on unconfirmed public reporting. Reporting describes FBI coordination with executive agencies and state/local partners; congressional oversight is a distinct process. No combined case file or established coordinated threat was obtained. [R01, R02, R21]

Exactly 10 or 11 elite scientists form a stable investigative cohort. Lists change by date and author and combine different roles, dates and statuses. R20 tracked 14 names; additions such as Amy Eskridge, Ning Li and Joshua LeBlanc require separate source review and should not be silently folded into a 2023–2026 cohort. This dossier creates eleven case entries because they match the named user claims and principal cited list, not because eleven constitutes an official cohort. [R01, R20]

A statistically unusual cluster has been demonstrated. Analyst inference: no specified source population, person-years, inclusion rule, baseline mortality/disappearance rate, age adjustment, geography control, or comparison group was supplied. Retrospective selection by scientific affiliation cannot itself establish statistical significance.

Top Secret clearances and shared employers prove a common operational link. Clearance claims need person-specific records and dates. Shared employers are contextual edges; a causal edge requires independent communications, transactions, access logs, forensic matching or a documented common actor. None was established here across the cases. [R05, R20]

No connection had been established by late April. Trump reported no established connection at that point. [R22]

4.1 William Neil McCasland

CASE-MCCASLAND

Status. Unresolved disappearance in located public records; no later verified resolution located by review date.

Former AFRL commander reported missing from Albuquerque on February 27, 2026. His senior historical role is verified; the materials reviewed do not establish abduction, a present classified project, or a link to the other cases. [R01, R05, R06]

Chronology

Date	Event and source
2013-04	Official Air Force biography describes AFRL command and earlier space-program assignments. [R05]
2026-02-27	Last-seen date in sheriff notice. [R06]
2026-04-20	House inquiry includes his disappearance and reports an alleged Reza professional connection. [R01]

Claim review

McCasland and Reza were linked through funded research, proving coordinated disappearances. *Unsupported causal inference.* The House letter attributes the connection to press reporting. Funding or organizational overlap does not establish operational coordination of their disappearances. [R01, R05]

Records still needed

- Current lead-agency status; missing-person report and verified last-seen chronology.
- Authenticated records establishing exact professional relationship and its dates.
- Specific evidence of actor, means, communications, or motive.

Research significance. Legitimate missing-person inquiry and personnel-safety concern; historical authority is context, not proof of targeting.

4.2 Matthew James Sullivan

CASE-SULLIVAN

Status. Death reported; medical-examiner conclusion available here through secondary reporting only.

Reported death May 12, 2024. April 25 reporting attributes accidental intoxication to Virginia’s medical examiner. Proposed congressional testimony and suspicions are separate reported assertions, not proof of homicide. [R19]

Chronology

Date	Event and source
2024-05-12	Reported death in Falls Church, Virginia. [R19]
2026-04-25	Reporting attributes accidental intoxication finding to medical examiner and notes congressional concern. [R19]

Claim review

He was killed to prevent whistleblower testimony. *Not established.* Neither causal silencing nor a verified imminent testimony schedule is established by documents obtained. Do not repeat earlier suicide descriptions as settled fact in light of later accidental-intoxication reporting. [R19]

Records still needed

- Original medical-examiner report and case number.
- Original referral letter, testimony invitation or interview schedule, and first-hand statements.
- Independent evidence connecting any protected disclosure to adverse action.

Research significance. Useful correction example: testimony allegation, death timing, medical cause, and manner of death need separate evidentiary fields.

4.3 Nuno F. G. Loureiro

CASE-LOUREIRO

Status. Homicide; identified perpetrator in published FBI findings; investigation remains formally ongoing in April 29 release.

MIT plasma physicist shot December 15, 2025, and died December 16. FBI findings identify Claudio Manuel Neves Valente acting alone, with no terrorism nexus; the FBI characterizes grievance-related motive as an assessment. [R03, R04]

Chronology

Date	Event and source
2025-12-15	Shot at his home in Brookline, Massachusetts. [R03, R04]
2025-12-16	Death announced by MIT. [R04]
2026-04-29	FBI announces sole-perpetrator findings, firearm correlation, and recorded confessions; assesses personal grievances. [R03]

Claim review

Loureiro’s killing demonstrates a coordinated foreign scientist-assassination network. *Contradicted by published investigative conclusion; no corroborating network evidence obtained.* FBI concludes Valente acted alone and had no terrorism nexus. Its behavioral motive assessment is not a judicial finding or proof excluding every hypothetical alternative. [R03]

Records still needed

- Full forensic exhibits and investigative file unavailable in this research.
- Any later amended findings after April 29.

Research significance. Strongest located case-specific investigative account within the recent list; must constrain any network hypothesis.

4.4 Michael David Hicks

CASE-HICKS

Status. Death confirmed by professional-society memorial; no original medical record obtained.

AAS memorial confirms July 30, 2023 death and past JPL research on comets and asteroids. No cause is specified in that memorial. [R07, R01]

Chronology

Date	Event and source
1998–2022	Worked at JPL, according to AAS memorial. [R07]
2023-07-30	Died at age 59. [R07]
2026-04-20	Retrospectively included in congressional inquiry based on public reporting. [R01]

Claim review

Lack of a public cause proves a suspicious death. *Unsupported.* A memorial is not a medical record; nondisclosure leaves a gap and establishes neither homicide nor concealment. [R07]

Records still needed

- Authorized access to death certificate, medical-examiner determination if any, and first-hand family account.

Research significance. Shows why a retrospective list must retain normal missing data without upgrading it to adverse evidence.

4.5 Carl Johann Grillmair

CASE-GRILLMAIR

Status. Homicide prosecution; latest verified procedural event is May 26, 2026 not-guilty plea, reported May 28.

Caltech/IPAC astronomer died February 16, 2026. Los Angeles prosecutors charged Freddy Snyder with murder and other offenses; Snyder pleaded not guilty. A case-specific prosecution exists, but a work-related motive or cross-case network is not established by the obtained record. [R08, R09]

Chronology

Date	Event and source
2026-02-16	Death outside home in Llano; prosecution later alleges shooting by Snyder. [R08, R09]
2026-05-26	Snyder pleaded not guilty to murder, carjacking and residential burglary in case 26AVCF00232. [R09]

Claim review

The charged suspect has been proved guilty, or the killing proves scientific-work targeting. *Not established.* Prosecution allegations require their own proof; not-guilty plea and presumption of innocence must be retained. No work-related motive appears in this prosecutor statement. [R09]

Records still needed

- Current court docket, charging document, hearing transcripts and forensic exhibits.
- Any independently corroborated motive evidence.

Research significance. Documentable violent death, requiring case-specific analysis; does not itself join separate incidents into one network.

4.6 Monica Jacinto Reza

CASE-REZA

Status. Missing in located official listing; cause of disappearance unresolved.

California DOJ lists last contact June 22, 2025, and a Los Angeles County Sheriff’s case number. House reporting identifies JPL materials work and disappearance while hiking. [R01, R10]

Chronology

Date	Event and source
2025-06-22	Last contact in California DOJ listing. [R10]
2026-04-20	Included in House inquiry; work and claimed McCasland relationship derived from cited press reports. [R01]

Claim review

Her disappearance was abduction by a scientist-targeting network. *Unproven.* The official listing establishes a missing person, not cause or perpetrator. [R10]

Records still needed

- Current LASD status and search-and-rescue report.
- Exact employment and project relationship records, rather than derivative headlines.
- Evidence distinguishing accident, voluntary disappearance and third-party involvement.

Research significance. Proper subject of continued case-level search and evidence collection; geographic or occupational proximity alone cannot decide cause.

4.7 Melissa Casias

CASE-CASIAS

Status. Deceased; manner undetermined according to August autopsy reporting, underlying report not acquired.

Reported missing June 26, 2025. NMSP announced identification of recovered remains May 30, 2026. August reporting states a gunshot wound caused death and manner remained undetermined. Earlier missing-person lists are superseded on this point. [R11, R12, R13]

Chronology

Date	Event and source
2025-06-26	Reported missing. [R12]
2026-05-28	Hiker discovered remains near McGaffey Ridge; police release reports a handgun nearby. [R12]
2026-05-30	NMSP announces positive identification; cause and manner then pending. [R11, R12]
2026-08-07	KOB reports autopsy cause gunshot wound to head, manner undetermined. [R13]

Claim review

Casias is still missing, or her manner of death is established as suicide or homicide. *Missing status outdated; either categorical manner unsupported here.* May identification changes status to deceased. Undetermined manner does not establish intentional killing or self-infliction. [R11, R12, R13]

Records still needed

- Authenticated OMI autopsy, scene documentation, evidence-recovery chronology and ballistics.
- Current police determination and explanations of any alleged evidence-handling gaps.

Research significance. Concrete update demonstrates the need for versioned statuses and dated forensic findings. No network link is established in obtained sources.

4.8 Anthony Chavez

CASE-CHAVEZ

Status. Missing in located public listing; no later verified resolution located.

New Mexico DPS lists missing from Los Alamos May 8, 2025; county police documented an active search May 19. Reporting identifies him as a retired construction foreman at Los Alamos, not a nuclear physicist. [R14, R15, R20]

Chronology

Date	Event and source
2025-05-08	Date Missing field in NM DPS listing. [R15]
2025-05-19	County police update describes searches and review of surveillance and tips. [R14]

Claim review

Employment at a nuclear laboratory establishes that he held scientific secrets and was abducted for them. *Unsupported.* Employment context is not verification of duties, clearance, motive or cause of disappearance. [R20, R14, R15]

Records still needed

- Original last-seen report, reconciling report date versus last contact.
- Current police status and authenticated employment responsibilities if materially relevant.

Research significance. Missing person case; include administrative and construction roles accurately in any population definition.

4.9 Steven Garcia

CASE-GARCIA

Status. Missing in located official listing; no verified resolution located.

New Mexico DPS lists Garcia missing from Albuquerque on August 28, 2025. Secondary reporting identifies a contract property-custodian role at the Kansas City National Security Campus. [R16, R20]

Chronology

Date	Event and source
2025-08-28	Official missing-person listing gives Albuquerque and this date. [R16]

Claim review

Property-custodian employment demonstrates coordinated national-security targeting. *Un-supported.* The official missing-person record does not establish clearance level, kidnapping or a shared perpetrator. [R16, R20]

Records still needed

- Current police report and corroborated last-seen circumstances.
- Employer role and clearance confirmation only if legally available and relevant.

Research significance. Maintain missing-person facts separately from job-title and security-clearance claims.

4.10 Jason Thomas

CASE-THOMAS

Status. Body attributed to Thomas in later reporting; reviewed primary evidence was indexed text of a preliminary official announcement.

Middlesex authorities reported recovery on March 17, 2026 of a body provisionally believed to be Thomas, missing since December 2025. They reported no foul play suspected on preliminary evidence. Final medical records were not acquired. [R17, R20]

Chronology

Date	Event and source
2025-12-12	Reportedly left home during the night. [R17]
2025-12-13	Reported missing to Wakefield police. [R17]
2026-03-17	Body recovered from Lake Quannapowitt; identification and cause/manner referred to medical examiner. [R17]

Claim review

The recovery proves assassination connected to nuclear or aerospace work. *Unsupported.* Initial authorities did not suspect foul play; reporting identifies pharmaceutical chemical-biology employment, which is not equivalent to classified nuclear work. [R17, R20]

Records still needed

- Final certified identification and cause/manner determination.
- Any evidence linking work or a specific actor to death.

Research significance. Distinguish discovery date, missing date, inferred death date and medically certified death date.

4.11 Frank Werner Maiwald

CASE-MAIWALD

Status. Death reported in contemporaneous obituary; original death certificate not acquired.

Obituary reports July 4, 2024 death and JPL instrument-management work, without cause. The obituary’s listed age and birth date conflict; some secondary accounts also disagree on the death date. [R18]

Chronology

Date	Event and source
2024-07-04	Death date in July 17 obituary. [R18]
2024-07-17	Obituary published. [R18]

Claim review

Unknown public cause or obituary inconsistencies show foul play. *Unsupported.* Record discrepancies require correction and source comparison; they do not establish intentional harm. [R18]

Records still needed

- Death certificate or family-confirmed dates and medical determination.
- Employer memorial or personnel confirmation of specific projects.

Research significance. Concrete provenance exercise: preserve inconsistent age/date fields with a correction request rather than inventing certainty.

5 Woolsey, anomalous health incidents and selected Russian deaths

5.1 R. James Woolsey Jr.

woolsey

Status. Death corroborated; hostile cause not established by reviewed material.

AP corroborates his death at 84. His wife reported a stroke and attributed prior decline to Havana syndrome; these are distinct propositions. [W01]

Chronology

Date	Event and source
2026-07-21	Died at his Washington home, according to AP’s subsequent obituary. [W01]

Claim review

Woolsey’s death proves directed-energy targeting. *Not established.* The obituary supplies no exposure measurement or causal finding. [W01]

Records still needed

- Medical records, death certificate, incident records, exposure measurements, and any case-specific investigative findings have not been obtained.

Research significance. A family report is evidence that the report was made; mechanism and attribution require independent corroboration.

5.2 Anomalous health incidents: changing assessments

ahi

Status. Contested causal attribution; real reported symptoms and unresolved individual cases.

The public record contains conflicting scientific and intelligence assessments. The 2023 and 2025 intelligence assessments were recalled in June 2026. Their earlier conclusions should be dated and shown alongside the recall; neither recall nor symptoms alone establish a foreign attack. [W02, W03, W04, W05, W06, W07, W12]

Chronology

Date	Event and source
2022-02-01	Expert panel considered pulsed electromagnetic energy plausible for a selected symptom pattern, with gaps; it explicitly did not assess perpetrator attribution. [W07]
2023-03-01	Most IC agencies assessed foreign-adversary responsibility as very unlikely, with differing confidence levels. Historical assessment later recalled. [W02, W04]
2024-03-18	NIH clinical study found most measures similar to controls, with differences including imbalance, fatigue, depression and posttraumatic stress symptoms. Separate MRI study found no significant corrected group differences in brain structure or function. [W05, W06]
2025-01-10	Most IC components retained the earlier judgment. One judged a roughly even chance of weapon use in a small subset; another allowed possible capability but considered deployment unlikely. The changed minority judgments had low confidence. Later recalled. [W03, W04]
2026-06-11	ODNI recalled both assessments for reassessment, citing analytic flaws including selective use of intelligence, source mischaracterization, information omission and ethics concerns. The House Intelligence chair publicly acknowledged the recall. [W04, W12]

Claim review

The NIH findings show that affected people’s symptoms were imaginary. *Unsupported inference.* Null group differences are not a diagnosis of an individual. Study authors recognized disabling symptoms and noted that earlier injury might no longer be detectable. A formal assessment of mass psychogenic illness was outside the clinical study’s scope. [W05, W06]

The 2026 recall proves a weapon, perpetrator, or a common network. *Not established.* The memorandum changes the standing of prior intelligence assessments; it does not resolve individual causation or identify an attacker. [W04]

Biological agents are established as the explanation for these AHIs. *Not established.* The 2022 panel considered chemical or biological agents alone implausible explanations for its selected core characteristics; combinations were not examined in detail. This is a scope-limited assessment, not a universal finding about all exposures. [W07]

Records still needed

- No replacement final intelligence assessment was located in this bounded review.
- Underlying classified data and individual clinical records are not available here.
- Any claimed device evidence requires primary provenance, exposure conditions, independent analysis, and case-specific linkage.

Research significance. Maintain separate evidence tracks for observed symptoms, measured exposure, mechanism feasibility, and actor attribution. A change in an official assessment must propagate to downstream summaries.

5.3 Ravil Maganov

maganov

Status. Death documented; manner and perpetrator not established here.

Lukoil’s chairman died in Moscow; Reuters sources described a hospital-window fall. Accounts of the circumstances conflicted. [W08]

Chronology

Date	Event and source
2022-09-01	Death reported; Lukoil referred to serious illness, while a state-media suicide account remained unconfirmed by Reuters. [W08]

Claim review

A Kremlin-directed killing is proven. *Not established.* The cited report supplies no finding identifying an assailant. [W08]

Records still needed

- Certified autopsy, scene documentation, witness statements and final investigative disposition absent.
- Research significance.** Correct the supplied name 'Raval Magen' to Ravil Maganov. A shared industry is an organizational connection, not evidence of common causation.

5.4 Pavel Antov

antov

Status. Death and investigation documented; no common-network attribution established.

A Russian businessman and regional legislator died while visiting Odisha, India. A criminal investigation was reported; later reporting described an autopsy classifying his death as accidental. [W10, W11]

Chronology

Date	Event and source
2022-12-24	Found dead at Hotel Sai International in Rayagada, according to later autopsy reporting. [W11]
2022-12-27	Autopsy report signed; later reporting described hemorrhagic shock from internal organ injury and an accidental classification. [W11]
2022-12-29	ABC reported police confirmation of a five-officer crime-branch team and collection of medical, travel and other records. [W10]

Claim review

The incident is established as part of a Russian purge. *Not established.* Investigation is not a homicide conclusion; ABC reported no hard evidence connecting the wider set of deaths. [W10, W11]

Records still needed

- Obtain original autopsy, police file number, witness interviews, scene evidence, and final case disposition; preserve inconsistent early descriptions as attributed accounts.

Research significance. A strong reusable dossier must retain the accidental classification alongside initial suspicion, rather than selecting the version that supports a theory.

5.5 Sergei / Sergey Protosenya

protosenya

Status. Deaths documented; staged-killing allegation not established.

The former Novatek executive and his wife and daughter were found dead in Spain. Reuters described Catalan police’s working murder-suicide explanation. [W09]

Chronology

Date	Event and source
2022-04-19	Family found dead at a Spanish villa, as recounted by Reuters. [W09]

Claim review

The family deaths were a staged Kremlin murder-suicide. *Not established.* The report contains no corroboration of staging or Kremlin direction. [W09]

Records still needed

- Original police and forensic reports, scene reconstruction, and final judicial disposition not acquired.
- Research significance.** Keep family objections, official hypotheses and physical findings in separate fields. Neither an official theory nor a competing accusation substitutes for the underlying record.

6 Documented comparators: what direct linkage looks like

6.1 Aldrich Ames: confirmed insider espionage comparator

P-AMES

Status. Documented guilty plea; separate comparator

Ames is included to show what an evidenced foreign-domestic connection looks like. The FBI describes CIA insider access, contact with Soviet handlers, payments, surveillance and recovered documents. His established espionage does not connect him to the deaths in this dossier. [P01]

Chronology

Date	Event and source
1985-04-16	FBI history dates Ames’s volunteering to the KGB to this day. [P01]
1994-02-21	Arrested by the FBI. [P01]
1994-04-28	Pleaded guilty and was sentenced to life imprisonment. [P01]

Claim review

Foreign services can recruit insiders in U.S. intelligence institutions. *Established in this individual case.* The documented mechanism was an insider passing classified information to foreign handlers, corroborated by financial, surveillance and documentary evidence. [P01]

Records still needed

- Obtain the plea agreement and judgment before using this example as a court exhibit.

Research significance. Analytic comparator only: seek actor-specific communications, access and transfers in any new case.

6.2 Robert Hanssen: access and audit failure comparator

P-HANSSEN

Status. Documented guilty plea and oversight findings

Hanssen’s espionage and the DOJ inspector-general review provide a concrete example of institutional vulnerabilities. The OIG identified excessive case-system access and failure to review audit trails. These are evidence-backed control failures, not evidence that the same mechanism explains an unrelated event. [P02, P03]

Chronology

Date	Event and source
2001-02-18	Arrested following an observed delivery of classified material. [P02]
2001-07-06	Pleaded guilty to espionage counts. [P02]
2002-05-10	Sentenced to life imprisonment without parole. [P02]
2003-08	DOJ OIG published its public executive summary. [P03]

Claim review

Access and review failures enabled repeated misuse of an internal records system. *Official oversight finding.* The OIG describes access beyond need-to-know and audit capability that was not routinely reviewed. This supports independent access review and preserved logs as control priorities. [P03]

Records still needed

- Full classified OIG report is outside this public packet; do not seek to place it in an ordinary cloud project.

Research significance. A useful model for proving a control failure through records rather than inferred affiliations.

6.3 Lu Jianwang: transnational operation comparator

P-LU

Status. Jury conviction reported by DOJ; later case history not checked

DOJ reported a May 2026 jury verdict involving an undeclared PRC-directed police station in New York and obstruction of justice. Its account describes handler direction, an office search, seized phones and deleted communications. The example establishes a specific adjudicated operation; it is not evidence of a universal network. [P04]

Chronology

Date	Event and source
2022-01	DOJ dates the beginning of work to establish the station under MPS direction to January 2022. [P04]
2022-10	FBI conducted a judicially authorized search and seized phones, according to DOJ. [P04]
2026-05-13	DOJ announced the jury conviction. [P04]

Claim review

A foreign government directed a specific domestic operation. *Verdict reported; evidence summarized by prosecution.* The DOJ account ties identified actors to instructions and recovered records. Obtain the judgment and trial exhibits for litigation use. [P04]

Records still needed

- Obtain certified judgment, trial exhibits and current docket; this packet makes no sentencing or appeal-status claim.

Research significance. A comparison for evidence of direction and control. Nationality, ethnicity and ordinary foreign contact do not establish agency or culpability.

7 Defensive control-point register

This is an author-created defensive review matrix informed by the cited standards, not a list of confirmed infiltrated systems. Hypotheses, proposed evidence and alternative explanations are research prompts. It is not exhaustive, does not rank the likelihood of these mechanisms, and does not establish a domestic or foreign network or that any reader is being targeted. Use only domains supported by concrete observations in the case.

These twenty domains cover technical, institutional, physical, medical and biological evidence pathways. They are not probabilities, a diagnostic checklist or a claim that every control point is compromised. For chemical, biological or clinical questions, record observations and seek qualified assessment; this packet supplies no methods for creating, delivering or concealing harmful agents.

7.1 CP01 / Identity and privileged access

Hypothesis to test: Account or administrative authority was misused.

Evidence to seek: Sign-in events, role history, approvals and recovery changes.

Alternative explanations: Shared accounts, VPN geolocation, authorized support.

Qualified review: Identity engineer; forensic examiner.

Defensive control: Phishing-resistant authentication; least privilege; independent access review.

Standards informing this review prompt: [C01]

7.2 CP02 / Endpoints and mobile devices

Hypothesis to test: Unauthorized software or configuration affected a device.

Evidence to seek: Device inventory, endpoint alerts, configuration history and preserved forensic image where authorized.

Alternative explanations: Updates, failing hardware, ordinary software defects.

Qualified review: Digital forensic examiner.

Defensive control: Supported software; managed updates; verified backups and incident handling.

Standards informing this review prompt: [C02]

7.3 CP03 / Cloud, collaboration and email

Hypothesis to test: Delegated access, forwarding or sharing exposed records.

Evidence to seek: Tenant audit exports, consent grants, mailbox rules and link-permission history.

Alternative explanations: Expected synchronization, administrator migration, mistaken sharing.

Qualified review: Cloud security engineer.

Defensive control: Review permissions and delegations; retain audit logs; restrict public links.

Standards informing this review prompt: [C02]

7.4 CP04 / Telecommunications and network infrastructure

Hypothesis to test: Communications were accessed or redirected without authorization.

Evidence to seek: Provider notices, authorized network logs, account changes and service tickets.

Alternative explanations: Outages, routing changes, spam or ordinary billing errors.

Qualified review: Telecom/network security specialist.

Defensive control: Provider security review; hardened administration; independent log retention.

Standards informing this review prompt: [C04]

7.5 CP05 / Technology suppliers and maintenance

Hypothesis to test: A supplier introduced an unapproved component or access path.

Evidence to seek: Contracts, approved inventory, update provenance, vendor access records and assurance reports.

Alternative explanations: Defective manufacturing, undocumented maintenance, vulnerable legitimate software.

Qualified review: Supply-chain security engineer.

Defensive control: Critical-supplier inventory; integrity checks; contractual evidence and incident duties.

Standards informing this review prompt: [C05]

7.6 CP06 / Buildings and physical access

Hypothesis to test: A restricted space or asset was accessed without authority.

Evidence to seek: Badge logs, visitor registers, contemporaneous incident records and lawfully obtained original video.

Alternative explanations: Clock mismatch, emergency access, tailgating without malicious intent.

Qualified review: Physical security professional.

Defensive control: Access review; time synchronization; retention and preservation procedures.

Standards informing this review prompt: [C01]

7.7 CP07 / Employment and retaliation

Hypothesis to test: A personnel action followed and was influenced by a protected disclosure.

Evidence to seek: Disclosure receipt, decision-maker knowledge, action dates, reasons and legitimate comparator records.

Alternative explanations: Documented pre-existing performance issues, restructuring, unrelated disputes.

Qualified review: Whistleblower/employment counsel; independent investigator.

Defensive control: Separate complaint review; document reasons; preserve favorable and unfavorable evidence.

Standards informing this review prompt: [C06]

7.8 CP08 / Clearance and intelligence oversight

Hypothesis to test: A clearance or access decision was used as reprisal.

Evidence to seek: Unclassified notices, disclosure dates, relevant authorization and review decisions obtained through approved channels.

Alternative explanations: Independent adjudicative concerns, routine review, incomplete information.

Qualified review: Cleared counsel; appropriate inspector general.

Defensive control: Use authorized reprisal channels; request written reasons and review rights.

Standards informing this review prompt: [C07, C19]

7.9 CP09 / Data provenance and automated decisions

Hypothesis to test: Incorrect data or an unreliable model materially affected a decision.

Evidence to seek: Input versions, source lineage, rule/model version, outputs, human overrides and validation results.

Alternative explanations: Matching error, stale data, distribution shift, lawful policy application.

Qualified review: Data engineer; statistician; domain expert.

Defensive control: Validate source records; track transformations; enable reasoned human review and correction.

Standards informing this review prompt: [C14]

7.10 CP10 / Procurement and financial incentives

Hypothesis to test: Purchasing or payments were influenced by undisclosed conflicts or false claims.

Evidence to seek: Solicitations, scoring, invoices, deliverables, approvals and authorized conflict disclosures.

Alternative explanations: Price variation, urgent procurement, accounting error.

Qualified review: Forensic accountant; procurement counsel.

Defensive control: Segregate approval and payment; reconcile delivery; independent conflict review.

Standards informing this review prompt: [C12]

7.11 CP11 / Records retention and custody

Hypothesis to test: Relevant records were lost, altered or disposed of without authorization.

Evidence to seek: Retention schedules, holds, transfer receipts, deletion logs and agency responses.

Alternative explanations: Authorized disposition, migration defects, accidental loss.

Qualified review: Records officer; forensic examiner; counsel.

Defensive control: Preserve originals; document custody; compare retention requirements with events.

Standards informing this review prompt: [C08]

7.12 CP12 / Laboratory biosafety

Hypothesis to test: An exposure resulted from a biosafety lapse or unauthorized handling.

Evidence to seek: Approved risk assessments, access records, training, incident reports and professionally obtained results.

Alternative explanations: Accidental exposure, unrelated infection, procedural error.

Qualified review: Biosafety officer; occupational physician; public-health specialist.

Defensive control: Protocol-specific risk review and authorized incident response; no self-collection or experimentation.

Standards informing this review prompt: [C15]

7.13 CP13 / Chemical and occupational exposures

Hypothesis to test: Workplace controls failed to prevent a harmful exposure.

Evidence to seek: Safety data sheets, hygiene plan, maintenance, calibrated monitoring and clinical findings.

Alternative explanations: Routine environmental variation, maintenance failure, unrelated illness.

Qualified review: Industrial hygienist; occupational physician.

Defensive control: Qualified exposure assessment; documented maintenance; appropriate medical evaluation.

Standards informing this review prompt: [C09]

7.14 CP14 / Medical records and causation

Hypothesis to test: A record error or unassessed clinical event affected care or later decisions.

Evidence to seek: Complete authorized records, original reports, medication history and clinician-documented chronology.

Alternative explanations: Common disease, medication effects, reporting or coding error.

Qualified review: Independent treating specialist; medical-records professional.

Defensive control: Seek appropriate care, record access and documented amendment/disagreement procedures.

Standards informing this review prompt: [C10]

7.15 CP15 / Scientific results and publication

Hypothesis to test: Fabrication, falsification or plagiarism distorted research.

Evidence to seek: Raw data, notebooks, protocol versions, analysis code, revisions and authorship communications.

Alternative explanations: Honest error, differing methods, reproducibility problems.

Qualified review: Research-integrity officer; independent scientific specialist.

Defensive control: Preserve data lineage; independent replication; formal integrity review.

Standards informing this review prompt: [C11]

7.16 CP16 / Oversight intake and referral

Hypothesis to test: An allegation was misrouted, incompletely recorded or inadequately reviewed.

Evidence to seek: Submission copies, receipts, reference numbers, referral history and written outcomes.

Alternative explanations: Jurisdiction limits, backlog, incomplete submission, lawful withholding.

Qualified review: Oversight investigator; administrative counsel.

Defensive control: Match issue to jurisdiction; track disposition and correction requests.

Standards informing this review prompt: [C22, C16]

7.17 CP17 / Personal information and publication

Hypothesis to test: Disclosure of identifying details created avoidable privacy exposure.

Evidence to seek: Access/sharing history, released versions, recipient list and redaction records.

Alternative explanations: Public records, self-publication, mistaken permissions.

Qualified review: Privacy professional; counsel.

Defensive control: Minimize data; separate identity key; independently inspect public redactions.

Standards informing this review prompt: [C20]

7.18 CP18 / Facility systems and operational technology

Hypothesis to test: A physical process was altered or lost reliability.

Evidence to seek: Authorized control-system logs, alarms, maintenance, calibration and operator records.

Alternative explanations: Equipment failure, sensor drift, utility loss, authorized adjustment.

Qualified review: Controls engineer; safety professional.

Defensive control: Safety-aware change control, asset inventory and independent monitoring.

Standards informing this review prompt: [C21]

7.19 CP19 / Incident logs and forensic interpretation

Hypothesis to test: Missing or altered telemetry obstructed reconstruction.

Evidence to seek: Original exports, collection method, time sources, retention settings and custody log.

Alternative explanations: Log rotation, clock drift, licensing limits, collection gaps.

Qualified review: Qualified forensic examiner.

Defensive control: Preserve before remediation when feasible; document every change and uncertainty.

Standards informing this review prompt: [C03]

7.20 CP20 / Cross-case coordination hypothesis

Hypothesis to test: Two events share a specific actor, asset or transaction.

Evidence to seek: Independent records linking identified entities, dated communications, transfers or access events.

Alternative explanations: Common employers/vendors, selection bias, coincidence, copied reporting.

Qualified review: Independent investigator; statistician; relevant specialist.

Defensive control: Require source-backed links and test rival explanations before attribution.

Standards informing this review prompt: [C03]

8 Evidence preservation and reporting routes

8.1 Civilian federal reporting

For covered federal employees, former employees and applicants, distinguish an OSC wrongdoing disclosure from a prohibited-personnel-practice/retaliation complaint. Record disclosure, knowledge, adverse action and causal evidence separately. Confirm jurisdiction, election-of-remedy issues and deadlines with the relevant office or qualified counsel; an evidence dossier alone does not confer whistleblower protection. [C06, C22]

8.2 Intelligence and classified information

Use the current IC IG or agency IG entry point to determine the appropriate process. ICWPA urgent-concern submissions have specific eligibility and subject-matter requirements. The archived form instructs users to arrange a proper channel if classified material may be involved. Never upload classified records to Overleaf, consumer cloud storage or this reusable public project. Confidentiality can have legal exceptions; do not promise anonymity. [C07, C19]

8.3 Military and defense contractors

DoD OIG provides a reprisal-investigation route; military and contractor cases require the applicable process. Coordinate any classified submission through the official classified-complaint instructions. An ordinary phone number or website is not authorization to transmit classified content. [C18, C24]

8.4 Other workers and workplace hazards

OSHA handles retaliation under specific statutes, with deadlines that can be as short as 30 days. A workplace safety complaint, NIOSH hazard evaluation request and retaliation complaint serve different purposes. Do not wait for this research packet to become complete before checking the applicable deadline. NIOSH accepts workplace hazard evaluation requests from employees, employers or union officials. [C23, C13]

8.5 Records requests

Request existing, reasonably described records from the agency/component likely to hold them: date range, record type, custodian and identifiers. Keep request, receipt, response and appeal dates. Federal FOIA does not compel new research or answers to a theory; state, court and private records use different routes. A denial or no-records response is a procedural result, not itself proof of concealment. [C16, C17]

8.6 Preservation and admissibility

Obtain only records you are authorized to access. Keep originals separate from working copies; record acquisition method, date, timezone, custodian and later transfers. A hash can detect later byte changes but cannot prove a record was truthful when created. Record any edits, conversions or redactions. Device examination can change evidence; coordinate professional collection where necessary. No dossier format guarantees admissibility. [C03]

8.7 Publication and identity safety

Keep a restricted identity index outside the public project. Publish only reviewed, authorized derivatives. Check document properties, filenames, embedded attachments and image text as well as visible redactions. Do not publish medical details, addresses, minors' information or witness identities merely because a source file contains them. [C20]

8.8 Suspected record destruction

For federal records, NARA accepts unauthorized-disposition allegations, including from private citizens. Describe the record, agency, relevant dates and basis for believing loss or alteration occurred. Preserve the request and response trail; distinguish observed loss from alleged intentional concealment. [C08]

8.9 Clinical and exposure evidence

Symptoms deserve appropriate clinical assessment regardless of suspected cause. Medical records, objective results and qualified occupational evaluation can clarify what happened; symptoms alone do not identify a perpetrator or mechanism. Do not conduct hazardous sampling, biological experimentation or covert testing. [C10, C13, C15]

8.10 A practical first review

Choose one verifiable adverse event. Write one neutral paragraph. Identify the best original record and the person or office that controls it. Preserve the record and its metadata. Identify one plausible alternative explanation and one piece of evidence that would distinguish it. Only then expand the event into a timeline or link it to another case.

When an urgent health or safety issue exists, obtaining care or appropriate emergency assistance takes priority over completing the packet. Health symptoms and technical anomalies deserve examination without first assuming an attacker or a mechanism.

8.11 Limits of this edition

This work does not exhaust the available archives or rank every death. It has not authenticated every mirrored record, acquired full case files, proved individual exposure, measured a mortality cluster, or established current legal rights for a particular person. Its value is a traceable starting record and a disciplined way to add evidence, contradictions and corrections.

Source register

- <https://www.govinfo.gov/content/pkg/CHRG-119hhrg64141/pdf/CHRG-119hhrg64141.pdf> **Type:** Official hearing transcript, Serial 119-68. **Pinpoint:** Title page; opening statement printed pp. 1–3 **Scope:** Documents renewed congressional attention and discussion of disclosure. **Limit:** Speakers’ assertions are attributed testimony and political statements, not new judicial findings.
- [R01] James Comer and Eric Burlison, House Committee on Oversight and Government Reform. *Letter to FBI Director Kash Patel on Missing Scientists*. 2026-04-20. https://oversight.house.gov/wp-content/uploads/2026/04/FBI-Missing-Scientists-Letter_4.20.26.pdf **Type:** primary congressional correspondence. **Pinpoint:** pp. 1–2; opening paragraph, footnotes 1–8, briefing request **Scope:** Documents inquiry into unconfirmed reporting and requested April 27 briefing; does not establish a causal network. **Limit:** Underlying factual narrative substantially cites Daily Mail and New York Post reporting. An official letter repeating a press allegation is not independent corroboration of that allegation.
- [R02] House Committee on Oversight and Government Reform. *Comer & Burlison Seek Information on Missing Nuclear and Rocket Scientists*. 2026-04-20. <https://oversight.house.gov/release/comer-burlison-seek-information-on-missing-nuclear-and-rocket-scientists/> **Type:** primary congressional announcement. **Pinpoint:** Opening paragraphs and links to four agency letters **Scope:** Confirms congressional requests to FBI, NASA, Energy, and the department named War in the announcement. **Limit:** Same inquiry as R01; not independent corroboration. Its use of unconfirmed reporting is material.
- [R03] FBI Boston and U.S. Attorney’s Office, District of Massachusetts. *FBI and U.S. Attorney’s Office for the District of Massachusetts Release Findings on Brown University and Brookline Shootings*. 2026-04-29. <https://www.fbi.gov/contact-us/field-offices/boston/news/fbi-and-us-attorneys-office-for-the-district-of-massachusetts-release-findings-on-brown-university-and-brookline-shootings> **Type:** primary investigative findings. **Pinpoint:** Conclusions, firearm analysis, motive assessment, final paragraph **Scope:** Finds Neves Valente acted alone in Brown and Loureiro shootings; no terrorism nexus; describes firearm correlation and recorded confessions. **Limit:** Published summary, not raw forensic exhibits. Motive is an FBI assessment; release says investigation remains ongoing after significant portion concluded.
- [R04] MIT News. *Nuno Loureiro, professor and director of MIT’s Plasma Science and Fusion Center, dies at 47*. 2025-12-16. <https://news.mit.edu/2025/nuno-loureiro-professor-director-plasma-science-and-fusion-center-dies-1216> **Type:** primary employer memorial. **Pinpoint:** Opening paragraphs **Scope:** Confirms death on December 16 following December 15 shooting and academic role. **Limit:** Memorial is not a homicide investigative finding.
- [R05] United States Air Force. *Major General William N. McCasland*. 2013-04. <https://www.af.mil/About-Us/Biographies/Display/Article/104776/major-general-william-n-mccasland/> **Type:** primary official biography. **Pinpoint:** Opening and assignments; ‘Current as of April 2013’ **Scope:** Verifies AFRL command and past space research, acquisition, and operations positions. **Limit:** Historical biography. Present-tense descriptions reflect 2013, not 2026 employment or clearance.
- [R06] Bernalillo County Sheriff’s Office. *Sheriff’s Office — missing William Neil McCasland notice*. undated live notice; incident 2026-02-27. <https://www.bernco.gov/bernalillo-county-sheriff/> **Type:** primary official missing-person notice, search-index retrieval. **Pinpoint:** Missing notice for William Neil McCasland **Scope:** Identifies missing-person case and last-seen date February 27, 2026. **Limit:** Full page returned 403; search-index text retrieved. No later resolution independently located. Do not use lack of search results as proof the case has had no developments.
- [R07] American Astronomical Society, Division for Planetary Sciences. *Michael David Hicks (1964–2023)*. 2023; precise publication date not displayed. <https://dps.aas.org/news/michael-david-hicks-1964-2023/> **Type:** professional society memorial. **Pinpoint:** Opening two paragraphs **Scope:** Death July 30, 2023; JPL work 1998–2022; comets, asteroids and listed missions. **Limit:** No medical cause supplied. An obituary’s silence about cause of death is not evidence of homicide or concealment.
- [R08] Isabel Swafford, Caltech/IPAC. *Caltech and IPAC Mourn the Passing of Carl Grillmair (1959–2026)*. 2026-02-22. <https://www.ipac.caltech.edu/news/ipac-mourns-passing-of-carl-grillmair> **Type:** primary employer memorial. **Pinpoint:** Opening; IPAC appointments and projects **Scope:** Confirms age 67, February 16 death, scientific work and IPAC employment. **Limit:** Does not establish motive or scientific-work connection to homicide.
- [R09] Los Angeles County District Attorney. *Charged Murderer Pleads Not Guilty in Shooting Death of Caltech Scientist*. 2026-05-28. <https://lacounty.gov/2026/05/28/charged-murderer-pleads-not-guilty-in-sho>

- oting-death-of-caltech-scientist/ **Type:** primary prosecutor statement. **Pinpoint:** Case 26AVCF00232; arraignment and alleged sequence **Scope:** Freddy Snyder charged with murder, carjacking and residential burglary; May 26 not-guilty plea; prosecution alleges shooting outside Grillmair's home. **Limit:** Charges and narrative are allegations, not convictions. Latest docket not obtained; do not present scheduled June 5 hearing as an event proved to have occurred.
- [R10] California Department of Justice, Office of the Attorney General. *Monica Jacinto Reza*. undated live listing; retrieved 2026-10-01. <https://oag.ca.gov/missing/person/monica-jacinto-reza> **Type:** primary missing-person listing. **Pinpoint:** Date Last Seen; reporting agency; case number **Scope:** Last contact June 22, 2025; LASD case 025-00905-1257-400. **Limit:** Missing-person listing does not determine cause of disappearance; active webpage can lag developments.
- [R11] New Mexico Department of Public Safety. *New Mexico State Police identify remains as missing Taos woman, Melissa Casias*. 2026-05-30. <https://www.dps.nm.gov/blog/2026/05/30/new-mexico-state-police-identify-remains-as-missing-taos-woman-melissa-casias/> **Type:** primary police announcement. **Pinpoint:** Headline and announcement; linked full release **Scope:** Officially confirms identification of Casias's remains. **Limit:** Website page is brief and links to a Facebook release not retrievable here. Full release reproduced in R12.
- [R12] NMSP news release republished by Los Alamos Reporter. *New Mexico State Police Identifies Remains As Missing Taos Woman, Melissa Casias*. 2026-05-30. <https://losalamosreporter.com/2026/05/30/new-mexico-state-police-identifies-remains-as-missing-taos-woman-melissa-casias/> **Type:** primary statement reproduced by local publisher. **Pinpoint:** NMSP NEWS RELEASE, paragraphs 2–5 **Scope:** May 28 remains discovery in Carson National Forest; handgun nearby; OMI identification; cause and manner then pending. **Limit:** Syndicated/reproduced statement; not independent corroboration of R11. May statement predates later autopsy reporting.
- [R13] KOB 4. *Autopsy report reveals cause of death for Melissa Casias*. 2026-08-07. <https://www.kob.com/new-mexico/autopsy-report-reveals-cause-of-death-for-los-alamos-worker/> **Type:** secondary reporting on autopsy. **Pinpoint:** Headline and opening, indexed source excerpt **Scope:** Reports gunshot wound to head as cause; manner of death undetermined. **Limit:** Underlying OMI report not acquired. Full page retrieval failed; indexed text checked alongside independent LA Times August 18 reporting. Do not convert undetermined manner to suicide or homicide.
- [R14] Los Alamos County / Los Alamos Police Department. *Search Continues for Missing Person, Anthony Chavez*. 2025-05-19. <https://www.losalamosnm.gov/Community/News-media/Search-Continues-Anthony-Chavez> **Type:** primary police announcement. **Pinpoint:** Announcement paragraphs **Scope:** Confirms active search, review of surveillance and tips, and coordination. **Limit:** Historical search update, not current case-status certification or finding of foul play.
- [R15] New Mexico Department of Public Safety. *Anthony Chavez — New Mexico Missing Person*. undated live listing; retrieved 2026-10-01. https://missingpersons.dps.nm.gov/mpweb/mpdetailreport_serv?id=M99969 **Type:** primary missing-person listing, search-index retrieval. **Pinpoint:** Date Missing field **Scope:** Lists May 8, 2025, Los Alamos. **Limit:** A stray 2023 line also appears in listing; use explicit Date Missing field, and seek original police report to reconcile. Full-page availability limited.
- [R16] New Mexico Department of Public Safety. *Steven Garcia — New Mexico Missing Person*. undated live listing; retrieved 2026-10-01. https://missingpersons.dps.nm.gov/mpweb/mpdetailreport_serv?id=M101688 **Type:** primary missing-person listing, search-index retrieval. **Pinpoint:** Date Missing and Missing from fields **Scope:** Lists August 28, 2025, Albuquerque. **Limit:** Does not verify employment, clearance, kidnapping or motive. Full-page retrieval failed; indexed text used.
- [R17] Middlesex District Attorney and Wakefield Police. *Body Recovered from Lake Quannapowitt in Wakefield*. 2026-03-17. <https://www.middlesexda.com/press-releases/news/body-recovered-lake%C2%A0quannapowitt-wakefield> **Type:** primary preliminary investigative announcement, indexed text. **Pinpoint:** Opening; last two paragraphs **Scope:** Body provisionally believed to be Jason Thomas recovered March 17; reported missing December 13 after leaving December 12; no foul play suspected on preliminary information. **Limit:** Identity and cause/manner expressly referred to medical examiner. Do not label final drowning date or certified manner from this preliminary statement. Full-page retrieval failed; extensive indexed text retrieved.
- [R18] Legacy Remembers; obituary submitter not identified in retrieved text. *Frank Maiwald Obituary (1964–2024)*. 2024-07-17. <https://www.legacy.com/us/obituaries/legacyremembers/frank-maiwald-obituary?id=6>

- 1298603 **Type:** obituary. **Pinpoint:** Opening two paragraphs **Scope:** Reports death July 4, 2024, Los Angeles and JPL instrument-management work. **Limit:** States age 61 but birth June 24, 1964, implying age 60 in July 2024; record is internally inconsistent. Do not silently resolve discrepancy or treat omission of cause as suspicious evidence.
- [R19] New York Post. *Would-be UFO whistleblower died of accidental drug overdose after agreeing to testify to Congress*. 2026-04-25. <https://nypost.com/2026/04/25/us-news/would-be-ufo-whistleblower-matthew-james-sullivan-died-of-accidental-drug-overdose/> **Type:** secondary reporting quoting medical examiner and legislator. **Pinpoint:** Medical-examiner report and letter reporting **Scope:** Reports Sullivan died May 12, 2024, at Falls Church, accidental intoxication; separately reports proposed testimony and legislative concern. **Limit:** Underlying medical examiner report, congressional scheduling record, and April 16 referral letter not acquired. Source is not proof of an exotic-technology program or silencing.
- [R20] Loreben Tuquero, PolitiFact. *Fact-checking claims about missing, dead scientists: Were they researching UFOs, nuclear weapons?*. 2026-04-28. <https://politifact.com/article/2026/apr/28/missing-dead-scientists-nuclear-weapons-ufos/> **Type:** secondary multi-source fact check. **Pinpoint:** Named-person inventory and employment comparison; source list **Scope:** Tracks 14 names across changing online lists; not all are scientists or documented colleagues. Reports NASA April 20 position that nothing related to NASA indicated national-security threat then. **Limit:** Its April status entries predate Casias recovery and April 29 Loureiro findings. Background source, not substitute for later primary documents. Lists a KLFY date inconsistent with its own publication chronology.
- [R21] Lewis Wiseman, Australian Broadcasting Corporation. *FBI investigating recent deaths and disappearances of multiple US scientists*. 2026-05-10. <https://www.abc.net.au/news/2026-05-10/us-scientists-missing-dead-fbi-nasa/106646664> **Type:** secondary reporting and interviews. **Pinpoint:** FBI statements; 'Who is involved?' **Scope:** Reports FBI and congressional investigations into possible connections, including scrutiny of foreign actors. **Limit:** Contains apparent errors: assigns Los Alamos to NASA and gives Maiwald July 7 rather than obituary July 4. Use only clearly attributed investigative-scope statement and limited employment context; does not verify a common perpetrator.
- [R22] Peter D'Abrosca, Fox News. *Congressman vows to find answers in missing, deceased scientists cases as Trump gives update on investigation*. 2026-05-01. <https://www.foxnews.com/us/congressman-vows-find-answers-missing-deceased-scientists-cases-trump-gives-update-investigation> **Type:** secondary reporting of public statement. **Pinpoint:** President's April 30 update **Scope:** Trump reported no established connection at that point. **Limit:** Presidential statement as reported, not released FBI case file.
- [W01] Associated Press. *R. James Woolsey, CIA director during the Clinton administration, dies at 84*. 2026-07-22. <https://apnews.com/article/james-woolsey-cia-director-dies-7390d7f481e1413bbced04edd43351ce> **Type:** Reported obituary. **Pinpoint:** Opening three paragraphs **Scope:** Death and attributed family account **Limit:** No medical records or causal investigation supplied; repeats newspaper interviews.
- [W02] ODNI / National Intelligence Council. *Updated Assessment of Anomalous Health Incidents*. 2023-03-01. <https://www.dni.gov/files/ODNI/documents/assessments/NIC-Unclassified-ICA-Updated-Assessment-AHI-March2023.pdf> **Type:** Primary intelligence assessment; recalled in 2026. **Pinpoint:** Printed pages 1–2; ICA 2023-02286-B **Scope:** Historical intelligence judgment **Limit:** RECALLED June 11, 2026; use only with W04. Public assessment is not a release of underlying classified evidence.
- [W03] ODNI / National Intelligence Council. *Updated Assessment of Anomalous Health Incidents, as of December 2024*. 2025-01-10. <https://archive.dni.gov/files/ODNI/documents/assessments/NIC-Unclassified-ICA-Updated-Assessment-AHI-December2024.pdf> **Type:** Primary intelligence assessment; recalled in 2026. **Pinpoint:** Printed pages 1–2; ICA 2025-00008-B **Scope:** Historical majority and minority judgments **Limit:** RECALLED June 11, 2026; use only with W04. Distinguish possible capability, possible use, and identification of a perpetrator.
- [W04] Office of the Director of National Intelligence. *Notification recalling the March 2023 and January 2025 AHI intelligence assessments*. 2026-06-11. <https://intelligence.house.gov/wp-content/uploads/2026/06/ICA-Recall-Notification.pdf> **Type:** Primary official recall memorandum. **Pinpoint:** Two pages, visually inspected **Scope:** Status change and ODNI reasons for recall **Limit:** Official findings about analytic process; does not identify the cause of a particular person's illness or name a proven perpetrator.
- [W05] Leighton Chan and colleagues; JAMA. *Clinical, Biomarker, and Research Tests Among US Government Personnel and Their Family Members Involved in Anomalous Health Incidents*. 2024-03-18. <https://ja>

- jamanetwork.com/journals/jama/fullarticle/2816533 **Type:** Primary exploratory clinical research. **Pinpoint:** Abstract; Discussion; Limitations; DOI 10.1001/jama.2024.2413 **Scope:** 86 AHI participants and 30 controls **Limit:** Selection and recall bias, unblinded assessments, timing differences, limited biomarkers; not a perpetrator-attribution study. The 2026 recall memo raises ethics concerns about a medical study; do not silently equate that with a journal retraction.
- [W06] Carlo Pierpaoli and colleagues; JAMA. *Neuroimaging Findings in US Government Personnel and Their Family Members Involved in Anomalous Health Incidents*. 2024-03-18. <https://jamanetwork.com/journals/jama/fullarticle/2816532> **Type:** Primary exploratory neuroimaging research. **Pinpoint:** Results; Limitations; DOI 10.1001/jama.2024.2424 **Scope:** 81 AHI participants and 48 controls **Limit:** Small sample, incomplete vocational matching, no scans earlier than 14 days; median delay 80 days. MRI findings cannot establish whether an undetected earlier injury occurred.
- [W07] ODNI / IC Experts Panel. *Executive Summary: Intelligence Community Experts Panel on Anomalous Health Incidents*. 2022-02-01. https://archive.dni.gov/files/ODNI/documents/assessments/2022_02_01_AHI_Executive_Summary_FINAL_Redacted.pdf **Type:** Primary expert-panel assessment. **Pinpoint:** PDF pages 1–3: scope and findings **Scope:** Plausibility of mechanisms for selected core characteristics **Limit:** Expressly excluded attribution to an actor; information gaps remain. Plausibility is not proof that a mechanism caused any individual event.
- [W08] Reuters; writing by Mark Trevelyan. *Top Russian oil official falls to death from hospital window – sources*. 2022-09-01. <https://www.reuters.com/world/europe/chairman-russian-oil-producer-lukoil-dies-after-falling-hospital-window-source-2022-09-01/> **Type:** Contemporaneous news reporting. **Pinpoint:** Opening paragraphs; sources and official-response paragraphs **Scope:** Maganov death and conflicting contemporaneous explanations **Limit:** Anonymous sources; no autopsy or final investigative record provided.
- [W09] Reuters. *Russian businessmen who have died in unexplained circumstances*. 2022-09-01. <https://www.reuters.com/world/europe/russian-businessmen-who-have-died-unexplained-circumstances-2022-09-01/> **Type:** News chronology. **Pinpoint:** Sergei Protosenya entry **Scope:** Protosenya family deaths and reported police hypothesis **Limit:** Summary of contemporaneous reports; not a final judicial finding or autopsy.
- [W10] Avani Dias and Som Patidar; ABC News Australia. *Indian police launch criminal investigation into mysterious death of Russian oligarch*. 2022-12-29. <https://www.abc.net.au/news/2022-12-29/indian-police-investigate-russian-oligarch-death/101815414> **Type:** Original reporting including police interview. **Pinpoint:** Police investigation paragraphs and 'A string of mysterious Russian deaths' **Scope:** Antov investigation, relevant records, and limits of connection claims **Limit:** Contemporaneous investigation status; no final disposition located in this research.
- [W11] Sujit Bisoyi; The Indian Express. *Autopsy on Russians: One death accidental, second a cardio-respiratory failure*. 2022-12-30. <https://indianexpress.com/article/india/rupture-of-lungs-liver-spleen-russian-sausage-tycoon-pavel-antovs-death-autopsy-report-8352129/> **Type:** Reporting describing autopsy reports. **Pinpoint:** Opening paragraphs and December 27 autopsy description; updated December 31 **Scope:** Antov date and reported autopsy classification **Limit:** Reporter account of medical records; original certified reports not acquired.
- [W12] House Permanent Select Committee on Intelligence. *Chairman Crawford Statement on Director Gabbard's Recall of the Flawed Intelligence Community Assessments on AHI*. 2026-06-11. <https://intelligence.house.gov/2026/06/11/chairman-crawford-statement-on-director-gabbards-recall-of-the-flawed-intelligence-community-assessments-on-ahi/> **Type:** Primary committee chair statement. **Pinpoint:** Statement dated June 11, 2026 **Scope:** Official corroboration of recall and chair's criticism **Limit:** Chair's characterizations are attributed positions, not findings of a court or independent medical review.
- [P01] Federal Bureau of Investigation. *Aldrich Ames*. Undated historical case page; accessed 2026-10-01. <https://www.fbi.gov/history/cases-and-criminals/aldrich-ames> **Type:** Official retrospective. **Pinpoint:** Arrest, 1985 contact, investigation and guilty-plea paragraphs **Scope:** Confirmed espionage and the investigation's evidence categories. **Limit:** Agency historical summary, not the complete trial record; current biographical status not relied on.
- [P02] Federal Bureau of Investigation. *Robert Hanssen*. Undated historical case page; accessed 2026-10-01. <https://www.fbi.gov/history/cases-and-criminals/robert-hanssen> **Type:** Official retrospective. **Pinpoint:** Arrest, plea and sentencing paragraphs **Scope:** Hanssen's arrest, guilty plea and sentence. **Limit:** Historical summary rather than full court exhibits.

- [P03] U.S. Department of Justice, Office of the Inspector General. *A Review of the FBI's Performance in Deterring, Detecting, and Investigating the Espionage Activities of Robert Philip Hanssen: Unclassified Executive Summary*. 2003-08. <https://oig.justice.gov/sites/default/files/archive/special/0308/index.htm> **Type:** Inspector-general report. **Pinpoint:** Sections I, II and III.1; ACS access and audit review paragraphs **Scope:** Documented access-control and supervision failures. **Limit:** Public executive summary; classified report and underlying records not obtained.
- [P04] U.S. Department of Justice. *Bronx Man Convicted of Operating Police Station for the Chinese Government in New York City and Obstruction of Justice*. 2026-05-13; updated 2026-05-20. <https://www.justice.gov/opa/pr/bronx-man-convicted-operating-police-station-chinese-government-new-york-city-and> **Type:** Official report of jury verdict. **Pinpoint:** Opening paragraph and 'As proved at trial' paragraphs **Scope:** Jury verdict and described evidence of a specific foreign-state-directed domestic operation. **Limit:** Prosecutor's account of verdict; trial transcript, judgment and later appellate history not acquired.
- [C01] NIST Joint Task Force. *Security and Privacy Controls for Information Systems and Organizations, NIST SP 800-53 Rev. 5*. 2020-09; updates through 2020-12-10; release 5.2.0 noted 2025-08-27. <https://csrc.nist.gov/pubs/sp/800/53/r5/upd1/final> **Type:** technical standard. **Pinpoint:** Abstract and control families AC, IA, AU, PE **Scope:** Risk-based security/privacy controls, including access, physical security and auditability. **Limit:** A control catalog does not establish that a particular intrusion or abuse occurred.
- [C02] NIST. *The NIST Cybersecurity Framework (CSF) 2.0*. 2024-02-26. <https://nvlpubs.nist.gov/nistpubs/CSWP/NIST.CSWP.29.pdf> **Type:** technical framework. **Pinpoint:** Appendix A: PR.AA, PR.PS, DE.CM, RS.AN **Scope:** Govern, identify, protect, detect, respond and recover outcomes. **Limit:** High-level outcomes require local implementation and evidence.
- [C03] Kent, Chevalier, Grance and Dang; NIST. *Guide to Integrating Forensic Techniques into Incident Response, NIST SP 800-86*. 2006-08. <https://csrc.nist.gov/pubs/sp/800/86/final> **Type:** technical guidance. **Pinpoint:** Abstract; sections 3 and 4 **Scope:** Computer and network forensic process and data sources. **Limit:** IT guidance, not a complete law-enforcement manual or legal advice; older implementation examples.
- [C04] CISA and partner agencies. *Enhanced Visibility and Hardening Guidance for Communications Infrastructure*. 2024-12-04. <https://www.cisa.gov/resources-tools/resources/enhanced-visibility-and-hardening-guidance-communications-infrastructure> **Type:** official cybersecurity guidance. **Pinpoint:** Summary and guidance for network defenders **Scope:** Communications infrastructure security and defensive visibility. **Limit:** Search-index summary verified; direct page retrieval returned HTTP 403. No inference that a particular individual was affected.
- [C05] NIST. *NIST CSF 2.0: Quick-Start Guide for Cybersecurity Supply Chain Risk Management, SP 1305*. 2024-10. <https://doi.org/10.6028/NIST.SP.1305> **Type:** technical guidance. **Pinpoint:** Pages 1-4: overview, critical suppliers, supplier requirements **Scope:** Supplier risk, responsibilities and evidence requirements. **Limit:** Overview only; not proof of malicious supply-chain activity.
- [C06] U.S. Office of Special Counsel. *Prohibited Personnel Practices Overview*. n.d.; accessed 2026-10-01. <https://www.osc.gov/services/prohibited-personnel-practices/overview/> **Type:** official legal guidance. **Pinpoint:** Whistleblower Retaliation; Other Retaliation; Accessing Medical Records **Scope:** Personnel retaliation elements and examples for covered federal employment. **Limit:** Coverage and remedies depend on employee status, disclosure and forum; examples are not case findings.
- [C07] Office of the Director of National Intelligence. *Accountability: Inspector General of the Intelligence Community*. n.d.; accessed 2026-10-01. <https://www.odni.gov/accountability/> **Type:** official reporting guidance. **Pinpoint:** IC IG; How to report to the IC IG **Scope:** Current IC IG hotline route for intelligence-related wrongdoing and reprisal. **Limit:** Anyone may report, but some protections apply only to IC employees/contractors; confidentiality is not guaranteed anonymity.
- [C08] National Archives and Records Administration. *Unauthorized Dispositions*. 2017-12-08; accessed 2026-10-01. <https://www.archives.gov/records-mgmt/resources/unauthorized-dispositions> **Type:** official records guidance. **Pinpoint:** 44 USC 3106; 36 CFR Part 1230; reporting paragraph **Scope:** Unlawful or accidental removal, alteration and destruction of federal records. **Limit:** Federal-records jurisdiction; records loss alone does not establish intent.
- [C09] OSHA. *29 CFR 1910.1450: Occupational Exposure to Hazardous Chemicals in Laboratories*. current web text accessed 2026-10-01. <https://www.osha.gov/laws-regs/regulations/standardnumber/1910/1910.1450> **Type:** regulation. **Pinpoint:** Paragraphs (d), (e), (f), (g), (h) **Scope:** Chemical hygiene plans, exposure

monitoring, medical consultation and safety data sheets. **Limit:** Application depends on workplace and substance; no individual exposure or causation finding.

- [C10] U.S. Department of Health and Human Services. *Your Medical Records*. n.d.; accessed 2026-10-01. <https://www.hhs.gov/hipaa/for-individuals/medical-records/index.html> **Type:** official patient-rights guidance. **Pinpoint:** Access; Corrections; limitations notice **Scope:** Access to covered medical/billing records and amendment or disagreement procedures. **Limit:** Exceptions apply; psychotherapy notes are separately restricted; guidance includes Ciox court-order qualification.
- [C11] HHS Office of Research Integrity. *Definition of Research Misconduct*. n.d.; accessed 2026-10-01. <https://ori.hhs.gov/definition-research-misconduct> **Type:** official research-integrity guidance. **Pinpoint:** Definition **Scope:** Fabrication, falsification and plagiarism in research. **Limit:** Definition alone does not establish jurisdiction or a finding; not every scientific dispute is misconduct.
- [C12] U.S. Government Accountability Office. *Standards for Internal Control in the Federal Government*, GAO-25-107721. 2025-05-15; effective FY2026. <https://www.gao.gov/products/gao-25-107721> **Type:** government internal-control standard. **Pinpoint:** Highlights; effective date **Scope:** Risk assessment, preventive controls, fraud/improper-payment risk and documentation. **Limit:** Internal-control framework does not itself prove fraud.
- [C13] CDC National Institute for Occupational Safety and Health. *Request a NIOSH Health Hazard Evaluation*. n.d.; accessed 2026-10-01. <https://www.cdc.gov/niosh/hhe/request/index.html> **Type:** official occupational health service. **Pinpoint:** At a glance; steps to take **Scope:** Employee, employer or union request for workplace hazard evaluation. **Limit:** Workplace evaluation channel, not an emergency service or attribution of an intentional attack.
- [C14] NIST. *AI Risks and Trustworthiness, AI RMF 1.0 section 3*. 2023. <https://airc.nist.gov/airmf-resources/airmf/3-sec-characteristics/> **Type:** technical framework. **Pinpoint:** Sections 3.1, 3.4 and 3.5 **Scope:** Validity, reliability, monitoring, accountability and explanation of AI decisions. **Limit:** Voluntary risk framework; does not establish statutory rights or that a decision used AI.
- [C15] CDC and NIH. *Biosafety in Microbiological and Biomedical Laboratories, sixth edition*. 2020; current landing page accessed 2026-10-01. <https://www.cdc.gov/labs/bmbl/index.html> **Type:** official biosafety guidance. **Pinpoint:** Core principle: protocol-driven risk assessment **Scope:** Laboratory risk assessment and appropriate safeguards. **Limit:** Advisory guidance cannot identify every risk or establish deliberate exposure.
- [C16] U.S. Department of Justice, Office of Information Policy. *Make a FOIA Request to DOJ*. n.d.; accessed 2026-10-01. <https://www.justice.gov/oip/make-foia-request-doj> **Type:** official records-request guidance. **Pinpoint:** Component routing paragraphs **Scope:** DOJ components process their own records requests. **Limit:** Response timing and releasability depend on records, exemptions and workload.
- [C17] FOIA.gov / U.S. Department of Justice. *Freedom of Information Act: Frequently Asked Questions*. n.d.; accessed 2026-10-01. <https://www.foia.gov/faq.html> **Type:** official records-request guidance. **Pinpoint:** What can I ask for; who handles requests **Scope:** Requests concern existing agency records; agencies need not conduct new research or answer questions. **Limit:** Federal FOIA differs from state public-records law and court access procedures.
- [C18] Department of Defense Office of Inspector General. *Whistleblower Reprisal Investigations*. n.d.; accessed 2026-10-01. <https://www.dodig.mil/Components/Administrative-Investigations/Whistleblower-Reprisal-Investigations/> **Type:** official reporting guidance. **Pinpoint:** Directorate overview **Scope:** DoD whistleblower reprisal investigation entry point. **Limit:** Search-index overview verified; direct retrieval returned HTTP 403. Confirm current eligibility and procedures at filing.
- [C19] Inspector General of the Intelligence Community. *IC Whistleblower Protection Act Disclosure Form*. Revision January 2024. https://archive.dni.gov/files/ICIG/Documents/Hotline/Forms/ICWPA_Disclosure_Form_v7.pdf **Type:** official intake form. **Pinpoint:** Pages 1-2 and 4-5 **Scope:** ICWPA urgent-concern criteria; classified-submission coordination; confidentiality exceptions. **Limit:** Archived form: use current IC IG entry point to confirm submission instructions.
- [C20] McCallister, Grance and Scarfone; NIST. *Guide to Protecting the Confidentiality of Personally Identifiable Information, NIST SP 800-122*. 2010-04. <https://csrc.nist.gov/pubs/sp/800/122/final> **Type:** technical guidance. **Pinpoint:** Abstract and scope **Scope:** Context-based protection from inappropriate access, use and disclosure of personal information. **Limit:** Older guidance; privacy risk remains contextual and cannot be eliminated by labels alone.

- [C21] NIST. *Guide to Operational Technology Security, NIST SP 800-82 Rev. 3*. 2023-09-28. <https://csrc.nist.gov/pubs/sp/800/82/r3/final> **Type:** technical guidance. **Pinpoint:** Abstract and scope **Scope:** Security of systems interacting with physical processes, with reliability and safety constraints. **Limit:** Rev. 3 is the cited final edition; search also surfaced a Rev. 4 draft, not substituted here.
- [C22] U.S. Office of Special Counsel. *Disclosure of Wrongdoing Overview*. n.d.; accessed 2026-10-01. <https://www.osc.gov/services/disclosure-of-wrongdoing/overview/> **Type:** official reporting guidance. **Pinpoint:** Disclosure Unit process **Scope:** Covered federal employee/applicant disclosures; agency investigation and OSC oversight. **Limit:** Wrongdoing disclosure process differs from retaliation complaint; OSC states it lacks independent investigative authority in these disclosure cases.
- [C23] OSHA Whistleblower Protection Program. *How to File a Whistleblower Complaint*. n.d.; accessed 2026-10-01. https://www.whistleblowers.gov/complaint_page **Type:** official reporting guidance. **Pinpoint:** Time Limits for Filing a Complaint **Scope:** OSHA-administered retaliation statutes and filing options. **Limit:** Jurisdiction and deadlines vary; listed time limits include 30, 60, 90 and 180 days.
- [C24] Department of Defense Office of Inspector General. *DoD Hotline: Classified Complaints*. n.d.; accessed 2026-10-01. <https://www.dodig.mil/Components/Administrative-Investigations/DoD-Hotline/Classified-Complaint/> **Type:** official reporting guidance. **Pinpoint:** Coordination of classified submissions **Scope:** Contact the Hotline to arrange appropriate classified submission procedures. **Limit:** Search-index summary verified; do not send classified content through ordinary web forms or unsecured calls.
